SAFETY TRAINING: Fire Prevention & Extinguisher Safety

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

The Fire Triangle

Fundamental principle of Fire Safety is to keep fuel sources and ignition sources separate.

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

The Fire Triangle

Three things must be present at the same time to produce fire:

1. Enough OXYGEN to sustain combustion
2. Enough HEAT to reach ignition temperature
3. Some FUEL or combustible material

Together, they produce the CHEMICAL REACTION that is fire. Take away any of these things and the fire will be extinguished

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Fuel Classifications

Fuel classifications are based on the fuel or combustible materials.

CLASSES OF FIRES	TYPES OF FIRES	PICTURE SYMBOL
A	Wood, paper, cloth, trash & other ordinary materials	
B	Gasoline, oil, paint and other flammable liquids.	
C	Fires involving live electrical equipment (plugged in).	
D	Combustible metals and combustible metal alloys.	
K	Cooking media (vegetable or animal oils and fats).	

The wrong type of fire extinguisher on the wrong class of fire can make matters worse.

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Fuel Classifications

Most fire extinguishers will have a pictograph label telling you which types of fire the extinguisher is designed to fight.

For example, a simple water extinguisher might have a label like this...

...which means it should only be used on Class A fires.

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

Different types of fire extinguishers are designed to fight different classes of fire.

The 3 most common types of fire extinguishers are:

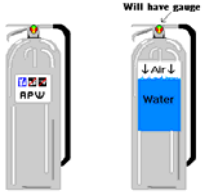

1. Water (APW)
2. Carbon Dioxide (CO₂)
3. Dry Chemical (ABC, BC, DC)

Fire Extinguisher Safety Training

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

1. Water (APW) Fire Extinguishers

Large silver fire extinguishers that stand about 2 feet tall and weigh about 25 pounds when full.

APW stands for "Air-Pressurized Water."

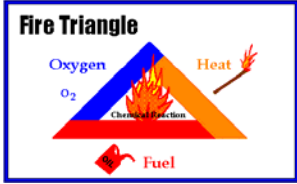

Filled with ordinary tap water and pressurized air, they are essentially large squirt guns.

Fire Extinguisher Safety Training

CENTRAL WELDING SUPPLY

Types of Fire Extinguishers

1. Water (APW) Fire Extinguishers

APW's extinguish fire by taking away the "heat" element of the Fire Triangle.

Fire Extinguisher Safety Training

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

1. Water (APW) Fire Extinguishers

APW's are designed for **Class A** fires ONLY: Wood, paper, cloth.

- Using water on a flammable liquid fire could cause the fire to spread.
- Using water on an electrical fire increases the risk of electrocution. If you have no choice but to use an APW on an electrical fire, make sure the electrical equipment is unplugged or de-energized.

Types of Fire Extinguishers

1. Water (APW) Fire Extinguishers

APWs are typically found in older buildings.

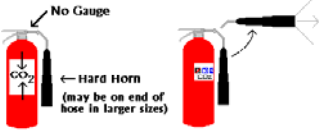

WARNING: Computers and other electrical equipment must be disconnected from their electrical source before using a water extinguisher on it.

Types of Fire Extinguishers

2. Carbon Dioxide Fire Extinguishers

The pressure in a CO₂ extinguisher is so great, bits of dry ice may shoot out of the horn!

CO₂ cylinders are red. They range in size from 5 lbs to 100 lbs or larger. On larger sizes, the horn will be at the end of a long, flexible hose.

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

2. Carbon Dioxide Fire Extinguishers

CO₂'s are designed for **Class B and C** fires ONLY (Flammable Liquids and Electrical Sources)

CO₂s will frequently be found in laboratories, mechanical rooms, kitchens, and flammable liquid storage areas.

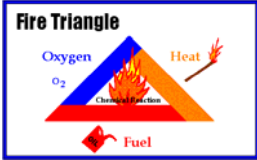

In accordance with NFPA regulations (and manufacturers' recommendations), all CO₂ extinguishers must undergo hydrostatic testing and recharge every 5 years.

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

2. Carbon Dioxide Fire Extinguishers

Carbon dioxide is a non-flammable gas that takes away the oxygen element of the fire triangle. Without oxygen, there is no fire.

CO2 is very cold as it comes out of the extinguisher, so it cools the fuel as well.

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

2. Carbon Dioxide Fire Extinguishers

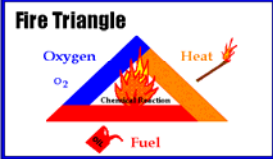

A CO2 may be ineffective in extinguishing a Class A fire because it may not be able to displace enough oxygen to successfully put the fire out.

Class A materials may also smolder and re-ignite.

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

3. Dry Chemical (ABC) Fire Extinguishers

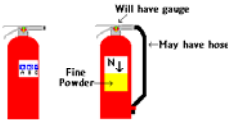

Dry chemical extinguishers put out fire by coating the fuel with a thin layer of dust. This separates the fuel from the oxygen in the air.

The powder also works to interrupt the chemical reaction of fire. These extinguishers are very effective at putting out fire.

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

3. Dry Chemical (ABC) Fire Extinguishers

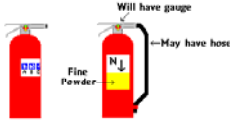

ABC extinguishers are red. They may range in size from 5 to 20 lbs.

"ABC" fire extinguishers are filled with a fine yellow powder. The greatest portion of this powder is composed of mono-ammonium phosphate. The extinguishers are pressurized with nitrogen.

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

3. Dry Chemical (ABC) Fire Extinguishers

Dry chemical extinguishers come in a variety of types...

You may see them labeled:

- DC (for "Dry Chemical")
- ABC (can be used on Class A, B, or C fires)
- BC (designed for use on Class B and C fires)

CENTRAL WELDING SUPPLY
 PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

3. Dry Chemical (ABC) Fire Extinguishers

It is extremely important to identify which types of dry chemical extinguishers are located in your area!

An "ABC" extinguisher will have a label like this, indicating it may be used on Class A, B and C fires.

You don't want to mistakenly use a "BC" extinguisher on a Class A fire thinking that it was an "ABC" extinguisher.

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Types of Fire Extinguishers

3. Dry Chemical (ABC) Fire Extinguishers

Dry chemical extinguishers with powder designed for Class B and C fires ("BC" extinguishers) may be located in places such as commercial kitchens and areas with flammable liquids.

Using a Fire Extinguisher

Remember the acronym PASS:

- 1. Pull**
- 2. Aim**
- 3. Squeeze**
- 4. Sweep**

Fire Extinguisher Safety Training

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Using a Fire Extinguisher

1. Pull the pin...

This will allow you to discharge the extinguisher

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Using a Fire Extinguisher

2. Aim at the base of the fire...

Hit the fuel.
 If you aim at the flames the Extinguishing agent will fly right through and do no good.

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Using a Fire Extinguisher

3. Squeeze the top handle...

This depresses a button that releases the pressurized extinguishing agent.

Fire Extinguisher Safety Training

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Using a Fire Extinguisher

4. Sweep from side to side...

Until the fire is completely out.
 Start using the extinguisher from a safe distance away, then slowly move forward.
 Once the fire is out, keep an eye on the area in case it re-ignites.

Rules for Fighting Fires

Fires can be very dangerous. Do not endanger yourself or others when attempting to put out a fire.

1. Assist any person in immediate danger to safety, if it can be accomplished without risk to yourself.
2. Call 911 or activate the building fire alarm. The fire alarm will notify the fire department and other building occupants and shut off the air handling system to prevent the spread of smoke.

If the fire is small, and only **AFTER** completing the above steps, you may attempt to use an extinguisher to put it out.

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Rules for Fighting Fires

Before deciding to fight the fire, keep these things in mind:

1. Know what's burning – so you will know what kind of extinguisher to use.
2. Even if you have an ABC fire extinguisher, there may be something in the fire that may explode or produce toxic fumes.

Chances are you will know what's burning, or at least have a pretty good idea, but if you don't, let the fire department handle it.

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Rules for Fighting Fires

- Before deciding to fight a fire, keep these things in mind:
 1. Is the fire spreading rapidly beyond the point where it started? The time to use an extinguisher is at the beginning stages of the fire.
 2. If the fire is already spreading quickly, it is best to simply evacuate the building.

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Rules for Fighting Fires

Do not fight the fire if:

- ✓ You don't have adequate or appropriate equipment. If you don't have the correct type or large enough extinguisher, it is best not to try fighting the fire.
- ✓ You might inhale toxic smoke. When synthetic materials such as the nylon in carpeting or foam padding in a sofa burn, they can produce hydrogen cyanide, acrolein, and ammonia in addition to carbon monoxide. These gases can be fatal in very small amounts.
- ✓ Your instincts tell you not to. If you are uncomfortable with the situation for any reason, just let the fire department do their job.

Fire Extinguisher Safety Training

CENTRAL WELDING SUPPLY
PACIFIC Xpress Cryogenics

Rules for Fighting Fires

The final rule is to always position yourself with an exit or means of escape at your back before you attempt to use an extinguisher to put out a fire.

In case the extinguisher malfunctions or something unexpected happens, you'll be able to get out quickly.
